How It Works

STRONGBACK
mobility

- STRONGBACK users sit in a healthy position. The shoulders are back, the whole spine is aligned, the chest is out and the head is comfortably supported.
- Our seats are tilted back to prevent the user from slipping forward and slouching.
- Along with our patented frame-integrated back support, we've included simple Velcro straps for adjustability of the seat back support.
- Swing-away detachable footrests make transferring in and out of a STRONGBACK smoother and safer.
- Our desktop-length armrests allow our users to get closer and sit more comfortably at tables and desks.
- The quick-release wheels allow for size reduction for easier storage.
- Ergonomic comfort-grip handles
- Detachable anti-tippers and clothing guard side panels
